

PRESERVATION TECHNOLOGIES & INFORMATION

to help you improve & manage your business

Osmose Australia was proud to host our 2007 regional seminars – Preservation Technologies and Information.

These seminars are very important for us and our customers, so that we can

Additional thanks go to John Taylor - Senior VP from Osmose Inc., who travelled “down under” to introduce the new MicroPro™ technology in Australia, that has recently become a commercial success in the US and to John Lord our Automation specialist who travelled from Osmose New Zealand to introduce the Osmose PCS plant automation program.

MicroShades™ Technology being presented at Melbourne conference.

One of our new technologies, MicroShades™, has been particularly welcomed as an initiative that will help to differentiate and add value to some specific landscaping products, and the new Osmose Process Control System (PCS) looks set to become the benchmark system in Australia as it has in so many other countries. We're looking forward to seeing these technologies being taken up and our customers realising some of the benefits.

introduce new technologies, discuss key industry issues and gain feedback on areas that may need more attention.

This year we covered Regulatory Changes, new Chemistry, new Plant Automation and Training and Category support.

Our special thanks go not only to our customers who made the effort to attend, but to our guest speakers from the Timber Development Association, Andrew Dunn and Nick Livanes.

Until the next round of seminars, we will continue to keep all of our customers and business partners informed of any significant industry or Osmose related news, in the meantime please make use of all the new features and content of our re-launched website www.osmose.com.au
